CARRER OBJECTIVES

Motivated Electronics and Communication Engineering student with strong interest in Embedded Systems, IoT, and real-time electronic applications. Seeking an opportunity to apply technical and analytical skills in a reputed organization.

SKILLS

Programming: Java, C programming **Frontend:** HTML, CSS **Backend:** Spring Boot **Database:** MySQL
Core: Embedded Systems, Microcontroller, IoT System, OOP'S **Tools & Technologies:** Arduino, ESP32, Git & GitHub

PROJECTS

Soldier's Health Monitoring and Tracking System using IoT (Aug-25 – Nov-25)

- **Real-Time Surveillance:** Developed an IoT system to monitor soldiers' vital signs (heart rate, SpO2, temperature) and precise GPS location, reducing emergency response time in high-risk environments.
- **Automated Alerting:** Engineered a trigger-based notification system that sends immediate SOS alerts via GSM/Cloud when vitals cross predefined safety thresholds (e.g., heart rate > 60 BPM or sudden temperature spikes).
- **Situational Awareness:** Designed a centralized dashboard (using ThingSpeak or an Android app) that allows commanders to visualize real-time unit health and positioning, enabling better strategic decision-making.
- **Safety Features:** Integrated a manual panic button and MPU6050-based fall detection to ensure immediate rescue coordination for injured or lost personnel.
- **Efficiency:** Optimized the system for low-power consumption to ensure continuous operation during extended missions.

EXPERIENCE

Web Development Intern (Entry Level):

3 months

- Worked on technical learning activities related to software and problem-solving concepts.
- Participated in practical sessions involving programming and project development.
- Strengthened analytical thinking and teamwork through collaborative assignments.
- Gained exposure to industry-oriented learning methodologies and technical communication.

Full Stack Web Developer (On-going):

6 months

Tap Academy

- **Performance Optimization:** Optimized front-end rendering and back-end API response times, resulting in a 30% increase in overall system performance and a smoother user experience.
- **Scalability:** Architected and implemented a scalable database schema using MySQL, reducing query latency by 20% for high-traffic modules.

- Efficiency: Developed a suite of reusable UI components using React, which reduced development time for subsequent features by 15%.

ACHIEVEMENTS

- Secured 1st place in ELECTROTHON 2.0 BY Jain University among 50+ teams (2024)
- Secured 1st place in INNOVATHON BY Jain University among 50+ teams (2025)

EDUCATION

B.E in Electronics and Communication

2022–2026

Government Engineering College, Ramanagara

Bangalore, India

CGPA: 8.11
